

Credit Card Fraud Detection

Overview

This project detects fraudulent credit card transactions using Machine Learning with Python.

Dataset

- Source: Kaggle Credit Card Fraud Dataset
- Features: Time, Amount, V1–V28, Class

Technologies Used

- Python
- Pandas
- NumPy
- Matplotlib
- Seaborn
- Scikit-learn
- Google Colab

Machine Learning Model

- Random Forest Classifier

Steps

1. Load dataset
2. Preprocess data
3. Train model
4. Predict fraud
5. Evaluate performance

Results

- Accuracy Score
- Confusion Matrix
- ROC Curve
- Feature Importance Graph
